# The ARCTUS AI-assisted SDB solution

## Empirical method

**OSW: Optical Shallow Waters**    **ODW: Optical Deep Waters**    **IOPs: Inherent Optical Properties**    **BREF: Bottom REFlectance**    **TS: Time Series**

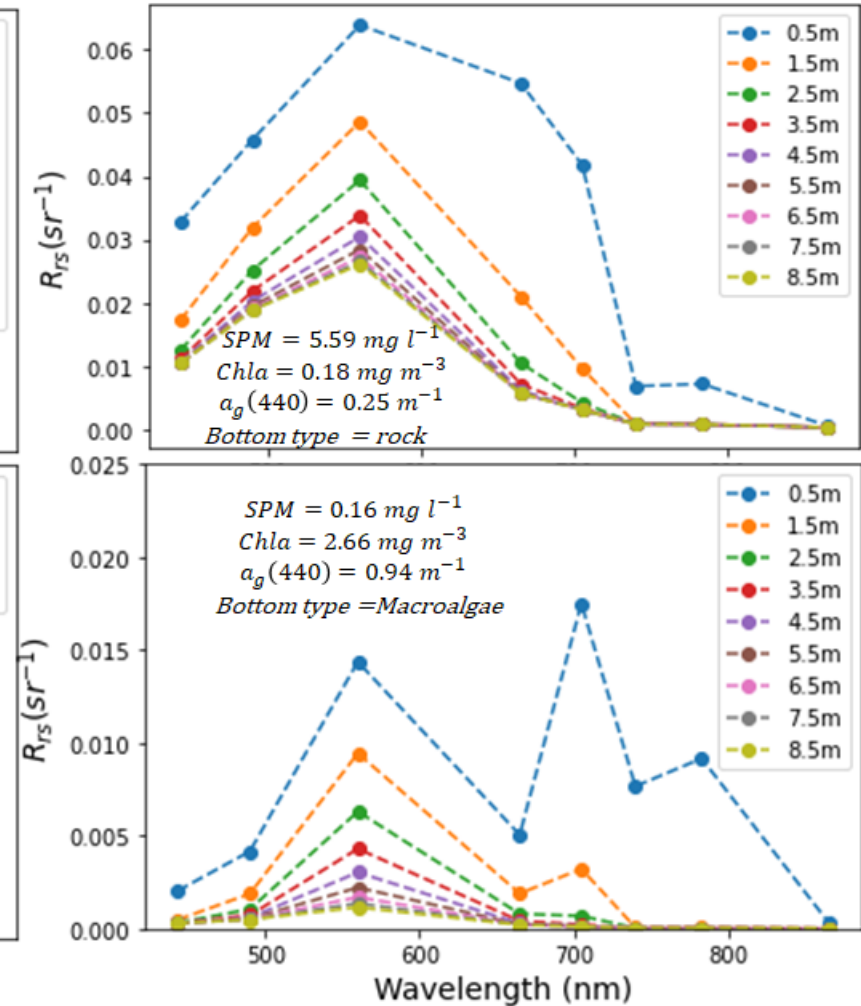

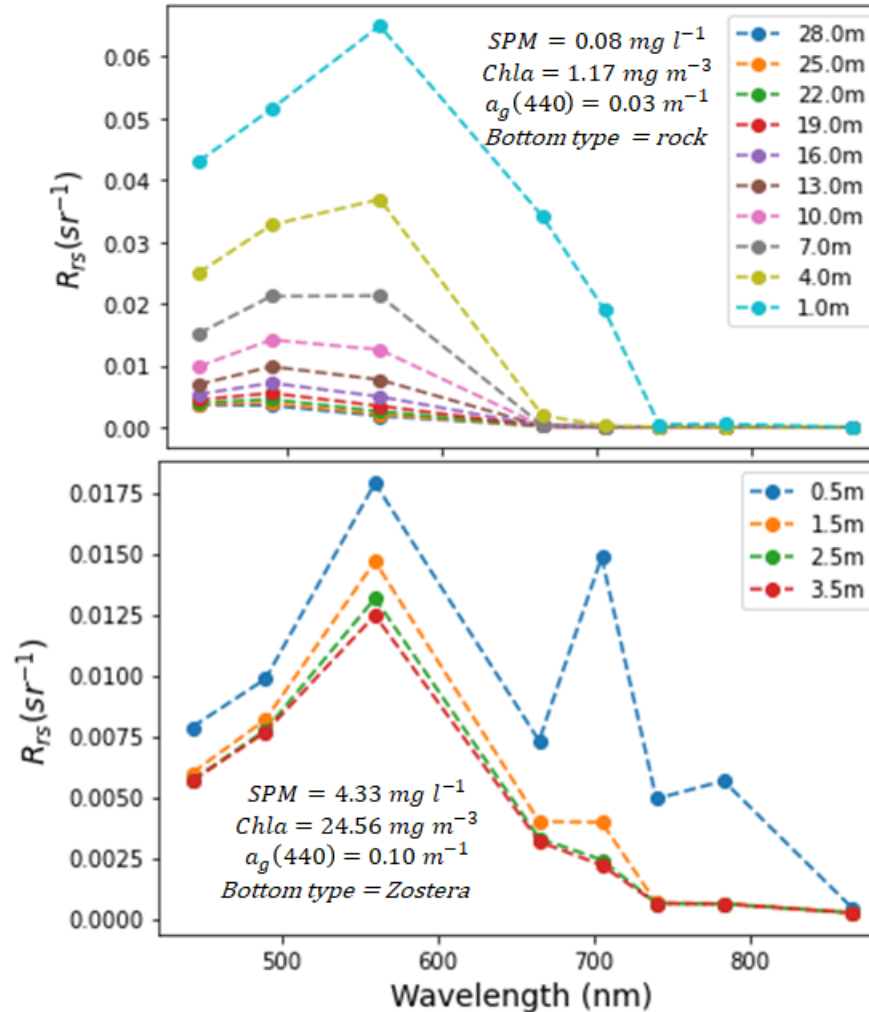

# Radiative transfer model and simulations

Model: **Albert & Mobley** (Albert et al., 2003)

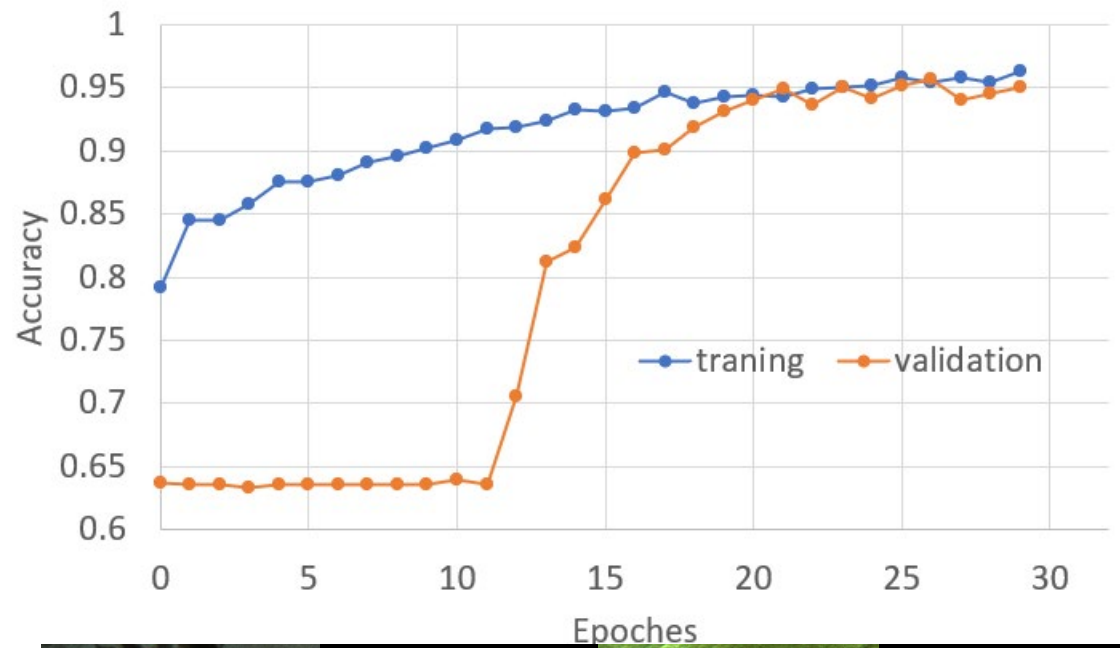

IOPs Parameterization: Cizimedi (2008)

Bottom types and reflectance: AquaTel UQAR (<https://aquatel.uqar.ca/>)

# OSW&ODW detection

# UNET

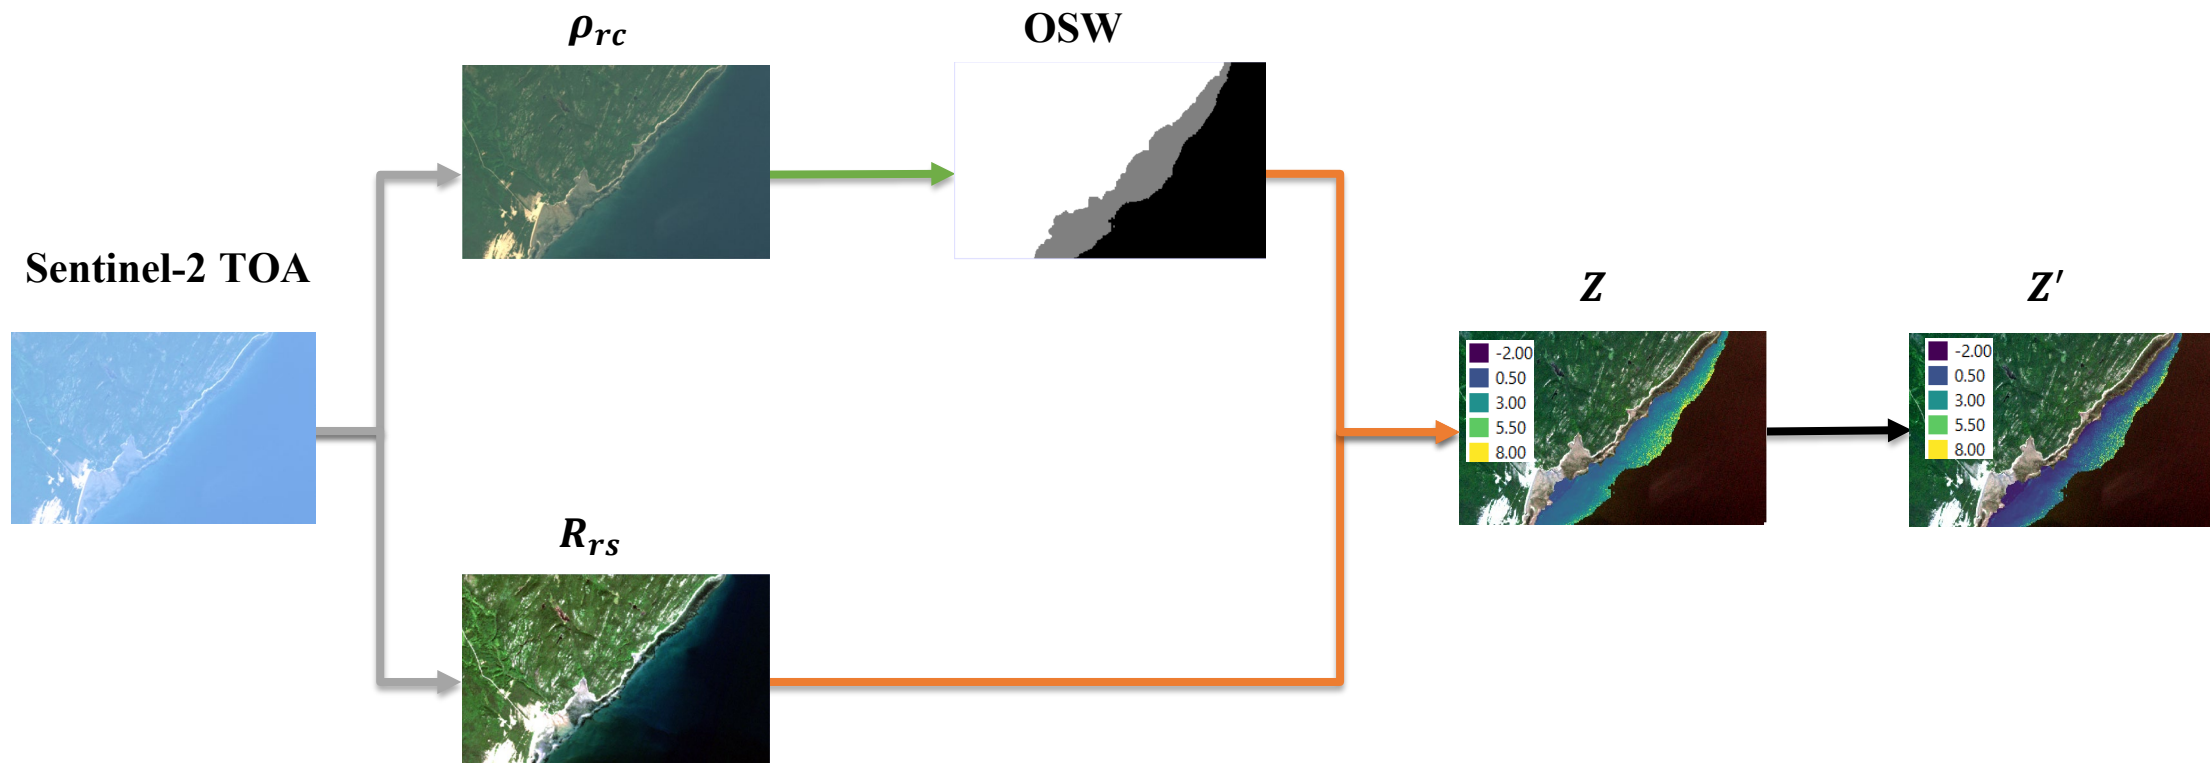

# SDB models

$$R_{rs} = f(IOPs, u, R_b, z)$$

Inputs		Modèle:				
		SDB-NI	SDB-IOPs	SDB-BREF	SDB-IOPs-BREF	SDB-TS
$R_{rs}(\lambda)$		✓	✓	✓	✓	✓ (6)
$R_b(\lambda)$		x	x	✓	✓	x
IOPs		x	✓	x	✓	x
Données auxiliaires (Vitesse du vent)		✓	✓	✓	✓	✓
Performances du modèle	MSE (m)	3.22	1.40	1.16	0.70	1.23
	MAE (m)	1.25	0.74	0.70	0.44	0.86
	MedAE (m)	0.83	0.39	0.40	0.16	0.67
	r	0.65	0.88	0.91	0.94	0.92

NONNA 10m

# Case study #6 Kugluktuk

The bottom reflectance are estimated from the neighbouring inter-tidal zone

Laboratoire Hydraulique Environnemental, INRS

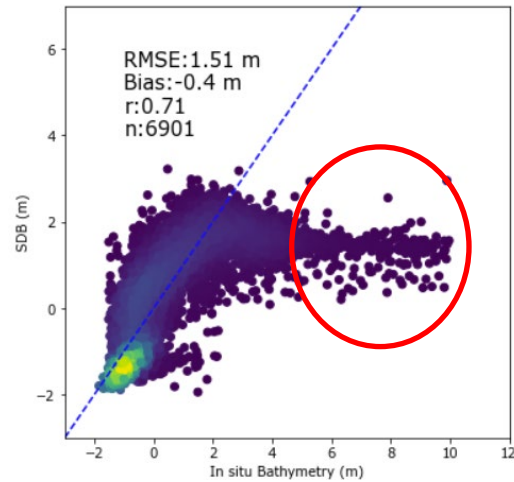

Hydroball + rover (2022)

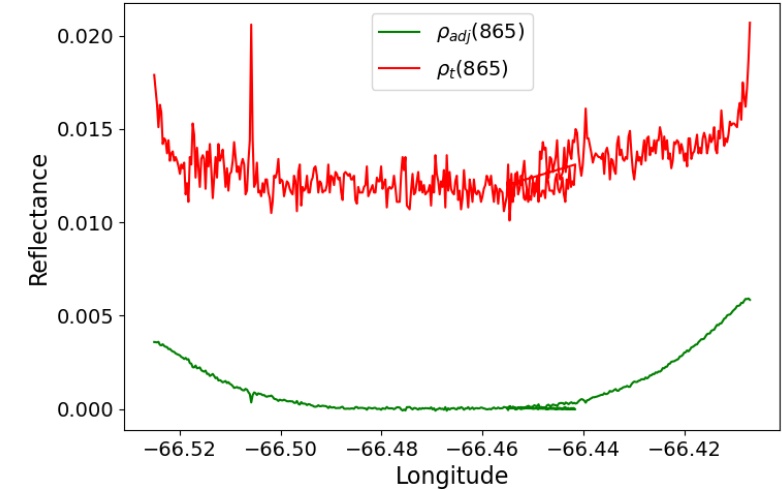

# Discussion

- Underestimation caused by wrongly identification of OSW

- Atmospheric correction

The reflectance contribution of adjacency effects estimated by GAAC (Pan et al., 2022)

- Overestimation caused by dark seagrass

- The water radiative transfer model

# Conclusion

- ✓ The ARCTUS AI-assisted physic-based method is showing promising results for mapping bathymetry in Quebec waters
- ✓ It has great potential to be continuously improved with the improvement of the relevant physical models and techniques, such as, water radiative transfer and atmospheric correction.
